

04 · Building a trading system

FXC Master · Class notes (view only)

Topics in this lesson

- Rules & checklist
- Entry & exit
- Consistency

Illustrative chart — for education only. Not financial advice.

Explanation

A trading system is a written set of rules: what you trade, when you enter, where your stop and target go, and how much you risk. If it is not written, it is not a system.

A simple checklist keeps emotion out of the decision. You either meet all conditions or you do not trade.

Consistency of process — not any single trade — is what produces results over time.
